SUMMARY

Final-year IT student with hands-on experience building robust backend architectures in Java (Spring Boot) and deploying via Docker. Passioned about translating complex business requirements into scalable product solutions. Proactive team player seeking a Product Backend Intern position to contribute to real-world products and master application operations.

TECHNICAL SKILLS

- Programming Languages: Java, PHP, C#, .NET
- Databases: MySQL, SQL Server
- Frameworks / Libraries: Spring Boot (JPA, Security)
- Tools: Git, GitHub, Postman, Docker

PROJECT

Social Media Platform | *SpringBoot, MySQL, Docker* **Feb 2026 - Apr 2026**
Team size: 4 (Backend Developer)

- Designed and implemented RESTful APIs for core social features (posts, likes, follows) using Spring Boot and JWT authentication.
- Implemented Server-Sent Events (SSE) for real-time activity notifications, eliminating the need for client polling.
- Built a friend request flow with status tracking and auto-follow, using composite indexes to optimize relationship queries and implemented infinite scroll news feed.
- Built a custom reverse proxy in Spring Boot to forward requests to a Node.js chat service, including authentication header propagation and error handling.
- Deployed backend on Render using Docker.
- Github
- Live demo

Fish Store Management Website | *SpringBoot, ReactJS, MySQL* **May 2026 - July 2026**

- Built a backend system using Spring Boot and MySQL, exposing RESTful APIs for inventory, orders, and customer management across B2B and B2C channels.
- Implemented secure authentication with Spring Security and JWT-based Role-Based Access Control for Admin, Staff, and Customer roles.
- Designed specialized inventory logic including FIFO batch tracking, dynamic unit conversion, time-based pricing, and perishable goods management, with automated order-fulfillment adjustments when stock runs short.
- Built a real-time notification system using Server-Sent Events (SSE) and scheduled jobs to alert staff about expiring inventory batches and automatically adjusted orders.
- Implemented a credit/debt tracking system for wholesale customers and integrated VNPAY for online payment processing.
- Github

EDUCATION

Bachelor of Information Technology Saigon Technology University (STU)

- Major in **Software Engineering**
- **GPA: 3.1/4.0**
- Expected Graduation: 2026

CERTIFICATES

- TOEIC: 620
- Japanese: JLPT N4 (07/2025) (Studying for N2)
